

-CONSUMER ALERT-

LIFE SAVING TEST!

Are you taking any Medications?

A simple 2-minute cheek swab can determine what medications work best for you.

- Every year 2 million people in the U.S. are hospitalized due to Adverse Drug Reactions
- 125,000+ die annually from Adverse Drug Reactions
- 4th leading cause of death
- Don't play Russian Roulette with your life!

Right Information – Right Drug – Right Dose Right from the Beginning

FDA Associate Director

“The science that allows us to predict a response to drugs based on an individual’s complete digital makeup”

PGx testing has been implemented at:

- Mayo Clinic
- Vanderbilt University Medical Center
- Johns Hopkins Hospital
- Duke Medical Center
- Stanford University Medical Center

OTHER BENEFITS:

- **May** help to reduce the number Of Medications, a patient takes
- **May** Reduce side effects And adverse drug reactions
- **More** effective response to medications

Your Representative:

LynStar Benefits, LLC

www.LynStarBenefits.com

Chris@Lynes.net

972-979-1701

SIMPLE STEPS:

- Contact your MedXprime Representative for details
- Get a free customized letter with concise information for your doctor
- Many Insurance Companies and Medicare covers the test (Exceptions Apply)

Protect Yourself and Your Loved Ones From Bad Drugs

10/28/2017

Did you know that there is a simple DNA test to determine which medicines that will create a negative reaction to for you? It also shows which medicines that you can take. WOW. I had no idea that such a test existed. I also found out that most people, and that includes the vast majority of doctors, don't know about this test. Is that sad or what?

I was especially interested as my wife has had reactions to drugs, and I think this will be of great benefit to her. I will get this test for her in the next few weeks. She has fibromyalgia, which is a difficult disease to treat, and to know which drugs will work, or not work for her, is huge. I will ask my doctor to perform this test on me next week, as well. I am on Medicare, so I know that the test will be covered by my insurance. I just found out last week that this test was available, and I want to give you more information so that you can know that you need to have this test done as soon as possible.

So, what is this test and how does it work?

It is called the PGxOne™ Plus test, and is relatively new to the medical community. That's why so few know about it. There is some evidence that the pharmaceutical industry would like to minimize the dissemination of the test as it could adversely affect their profits. After all, if their new and expensive drug will cause you to have a serious reaction, or even death, you would want to know, but the Pharmaceutical industry, not so much.

It's a simple test that is what is known as a Buccal Swab. The Dr. uses what looks like a large Q-tip and swabs the inside each cheek and then sends it off to the lab for testing. That's it. Very easy and quick. In a few days, the lab test is completed and a report is generated which tells you and the Dr. just what drugs are OK and which drugs are not OK. The Dr. can then prescribe drugs with a much higher confidence that it will be effective and cause you no adverse reactions.

Harvard says:

"Few know that systematic reviews of hospital charts found that even properly prescribed drugs (aside from mis-prescribing, overdosing, or self-prescribing) cause about 1.9 million hospitalizations a year. Another 840,000 hospitalized patients are given drugs that cause serious adverse reactions for a total of 2.74 million serious adverse drug reactions. About 128,000 people die from drugs prescribed to them. This makes prescription drugs a major health risk, ranking 4th with stroke as a leading cause of death."

The FDA says:

"However, other studies conducted on hospitalized patient populations have placed much higher estimates on the overall incidence of serious ADRs. These studies estimate that 6.7% of hospitalized patients have a serious adverse drug reaction with a fatality rate of 0.32%. If these estimates are correct, then there are more than 2,216,000 serious ADRs in hospitalized patients, causing over 106,000 deaths annually. If true, then ADRs are the 4th leading cause of death—ahead of pulmonary disease, diabetes, AIDS, pneumonia, accidents, and automobile deaths. These statistics do not include the number of ADRs that occur in ambulatory settings. Also, it is estimated that over 350,000 ADRs occur in U.S. nursing homes each year. The exact number of ADRs is not certain and is limited by methodological considerations. However, whatever the true number is, ADRs represent a significant public health problem that is, for the most part, preventable."

PHARMACOGENOMICS TEST TO BETTER TREAT PSYCHIATRIC DISEASES & DISORDERS

PGxOne™ Plus is a pharmacogenomics test that can also help predict how a patient will respond to drug therapy based on individual genetic makeup.

- Genetic variants affect drug absorption, metabolism and activity. Results guide effective treatment decisions, potentially reducing adverse drug events (ADEs) and trial-and-error drug selection and dosing.
- Provides recommendations for over 300 commercial drugs, with extensive coverage of psychiatric drugs
- Cutting-edge Next Generation Sequencing (NGS) technology enables comprehensive coverage of ~200 genetic variants in 50 genes.
- Delivers medically actionable recommendations in an easy to interpret report.

Would YOU like anyone who suffers from these issues to get the wrong medicine?

OK, you now understand that this test should be done by everyone. You only need to take one to get the key results. Because it's based on your DNA, you only have to take the test once in your life. Keep the report for discussion with any doctors you need now, or in the future.

What can you do to help get the word out?

There are two ways to help us get the word out to both people and doctors. That is to contact us a chris@lynes.net to get a letter to take to your doctor. Please give this information to anyone you know that would like to get this test, which should be everyone you know. Include your name and your Doctor's name and we will get that letter back to you via your email. This letter is three pages. The first two are for you to explain what to do with the letter and explain it to your doctor. The third page is the actual letter to give to your doctor. If you have questions, please contact us at 972-979-1701. We are in the Central time zone and you can call anytime during regular business hours, but you can email any time.

The second way is to become a representative for us and spread the word yourself to people and doctors and receive a commission to do so. The details for this way is beyond the scope of this document, but there is a way for you to get full details.

Getting involved full or part time:

Here is the second way to get involved and where I really need your help. The company that has introduced the program is looking for people who can bring this to doctors. It's so new that very few doctors know about this although it's been around for several years and there is a huge income opportunity. We can do this part-time or full-time and have our own business together. We need to talk about this; it could well be the thing that we've both been looking for. Save lives, make money. Sounds good to you?

Here's a short 3 minute video: <https://vimeo.com/financialhalo/review/133791389/96829b0d27>

Weekly Webinars - The Company does a concise, to-the-point presentation with no nonsense or fluff. I ask you to please do me a favor and more importantly do yourself a favor and attend the webinar presentation. They are held Monday, Wednesday, and Thursday at 6PM PDT and Saturdays at 10AM PDT. Please be on time as the webinars start promptly. You don't have to speak, just relax with a drink and give it your undivided attention. We all know people who are on medications and are at risk. I'd like your support by attending, just get informed; you're not committing to anything.

Please register for the webinar at:

<https://register.gotowebinar.com/register/1306388424867019778>

Then shoot me a text or email and let me know which one you'll be attending.

This registration link sometimes changes so if the link does not work, email me and I will send the right one.

Sincerely and with gratitude,

Chris Lynes, Certified Representative
